

PRESS RELEASE

September 17th, 2019

Redsense Medical announces new website launch

Redsense Medical has launched a new website for patients, healthcare professionals, and investors who want to learn more about the innovative products and technology Redsense has to offer. The site presents practical information, training, and investor relation activities.

More information can be found at: <https://redsensemecial.com>.

“This new website gives a clearer overview of our activities and easy access to information. We will constantly update our content and user experience to convey improved communication.”

Says Patrik Byhmer, CEO Redsense Medical

We hope you will find this new website helpful and feel free to contact us for any additional information.

ABOUT REDSENSE MEDICAL

Redsense Medical is a corporate group with operations mainly in Europe and the United States. The company has developed the Redsense System, an innovation used for monitoring and alarm in the case of blood leakage in connection with a hemodialysis treatment. Redsense Medical solves one of the most serious remaining safety problems within hemodialysis – to quickly detect Venous Needle Dislodgement and catheter leakage to minimizing blood leakage. The system consists of a patented fiber optic sensor, designed for either venous needle or central venous catheter, which is connected to an alarm unit. From the very start, the development of the company's technology has been based on the demands and safety requirements of healthcare providers in the dialysis sector.
